ABOUT US

WTB company as a trademark is synonymous for well-designed quality products made from sustainable sources. Our base material is a composite made of recycled polypropylene and saw dust made

from FSC certified wood. Both from local sources. Having avoided adding harmful substances both to the environment and to people. The WTBCompany quality warrant is a product in compliance with test norms for both domestic as well as industrial use. Test reports are available. Here at WTBCompany we work on not just improving the green contents but on also adding a feature of design to catch eyes. All WTBCompany products are 100% Made in Turkey.

DECK

A deck from WTBCompany is as good for your feet as it is for the environment. Using the mix of polypropylene and saw dust from beech we can offer you a product that will not shrink due to the weather, will not crack due to mechanical impact, is easy to build with and above all – does not require maintenance!

What is the difference between a decking from WTBCompany compared to another source? Instead of looking through test reports just take a nail and a hammer. Place the nail approximately 4cm from the edge of a board and hit it as hard as you can. If the board does not crack, then the quality is good but if it does crack; we suggest you call us and start buying our products. This is not a trade secret, like there can be. We at WTBCompany use polypropylene which is more forgiving with a longer lifespan than the cheaper alternatives such as PVC, polystyrene or polyethylene.

This test might seem harsh on product, but you want something that will survive the beating of dropped cutlery, toys being moved around and worse – small stones stuck underneath your shoes. No impact.

We at WTBCompany have been quite picky when choosing the raw materials for our composite – a long lasting deck from WTBCompany will give you time to do other things than building decks.

We have all the parts you need to build your deck.

PERGOLA

A pergola from WTBCompany will give you the best of both worlds. Simple to assemble and without a required maintenance, all made of wood.

Our frames and beams are made of the famous WTBCompany composite built on recycled polypropylene with FSC certified saw dust from beech.

You can assemble the pergola using our clips or just nails and screws. Our suggestion is to use the clips we provide. Doing that you will get a genuine shock when discovering how light our beams are in comparison to wood. All without compromising the WTBCompany quality and lastivity.

We at WTBCompany know it takes a long time and extra effort for your flowers and bushes to grow up and around the frame of the pergola. That is why we put extra work into creating a system that does not require you to cut down the greens to do the yearly oiling a system made of wood would require.

So how are we in comparison to other producers? As we use polypro-pylene rather than PVC, polystyrene or polyethylene WTBCompany will get you a system that is not affected by weather. UV rays tend to be very hard on these other materials.

So, let us at WTBCompany build your next pergola for you!

RAILING AND FENCE

A good railing and fence will give your deck a certain look and grace. It must be comfortable to touch and must be sturdy enough to allow your kids to use it as goal when playing football.

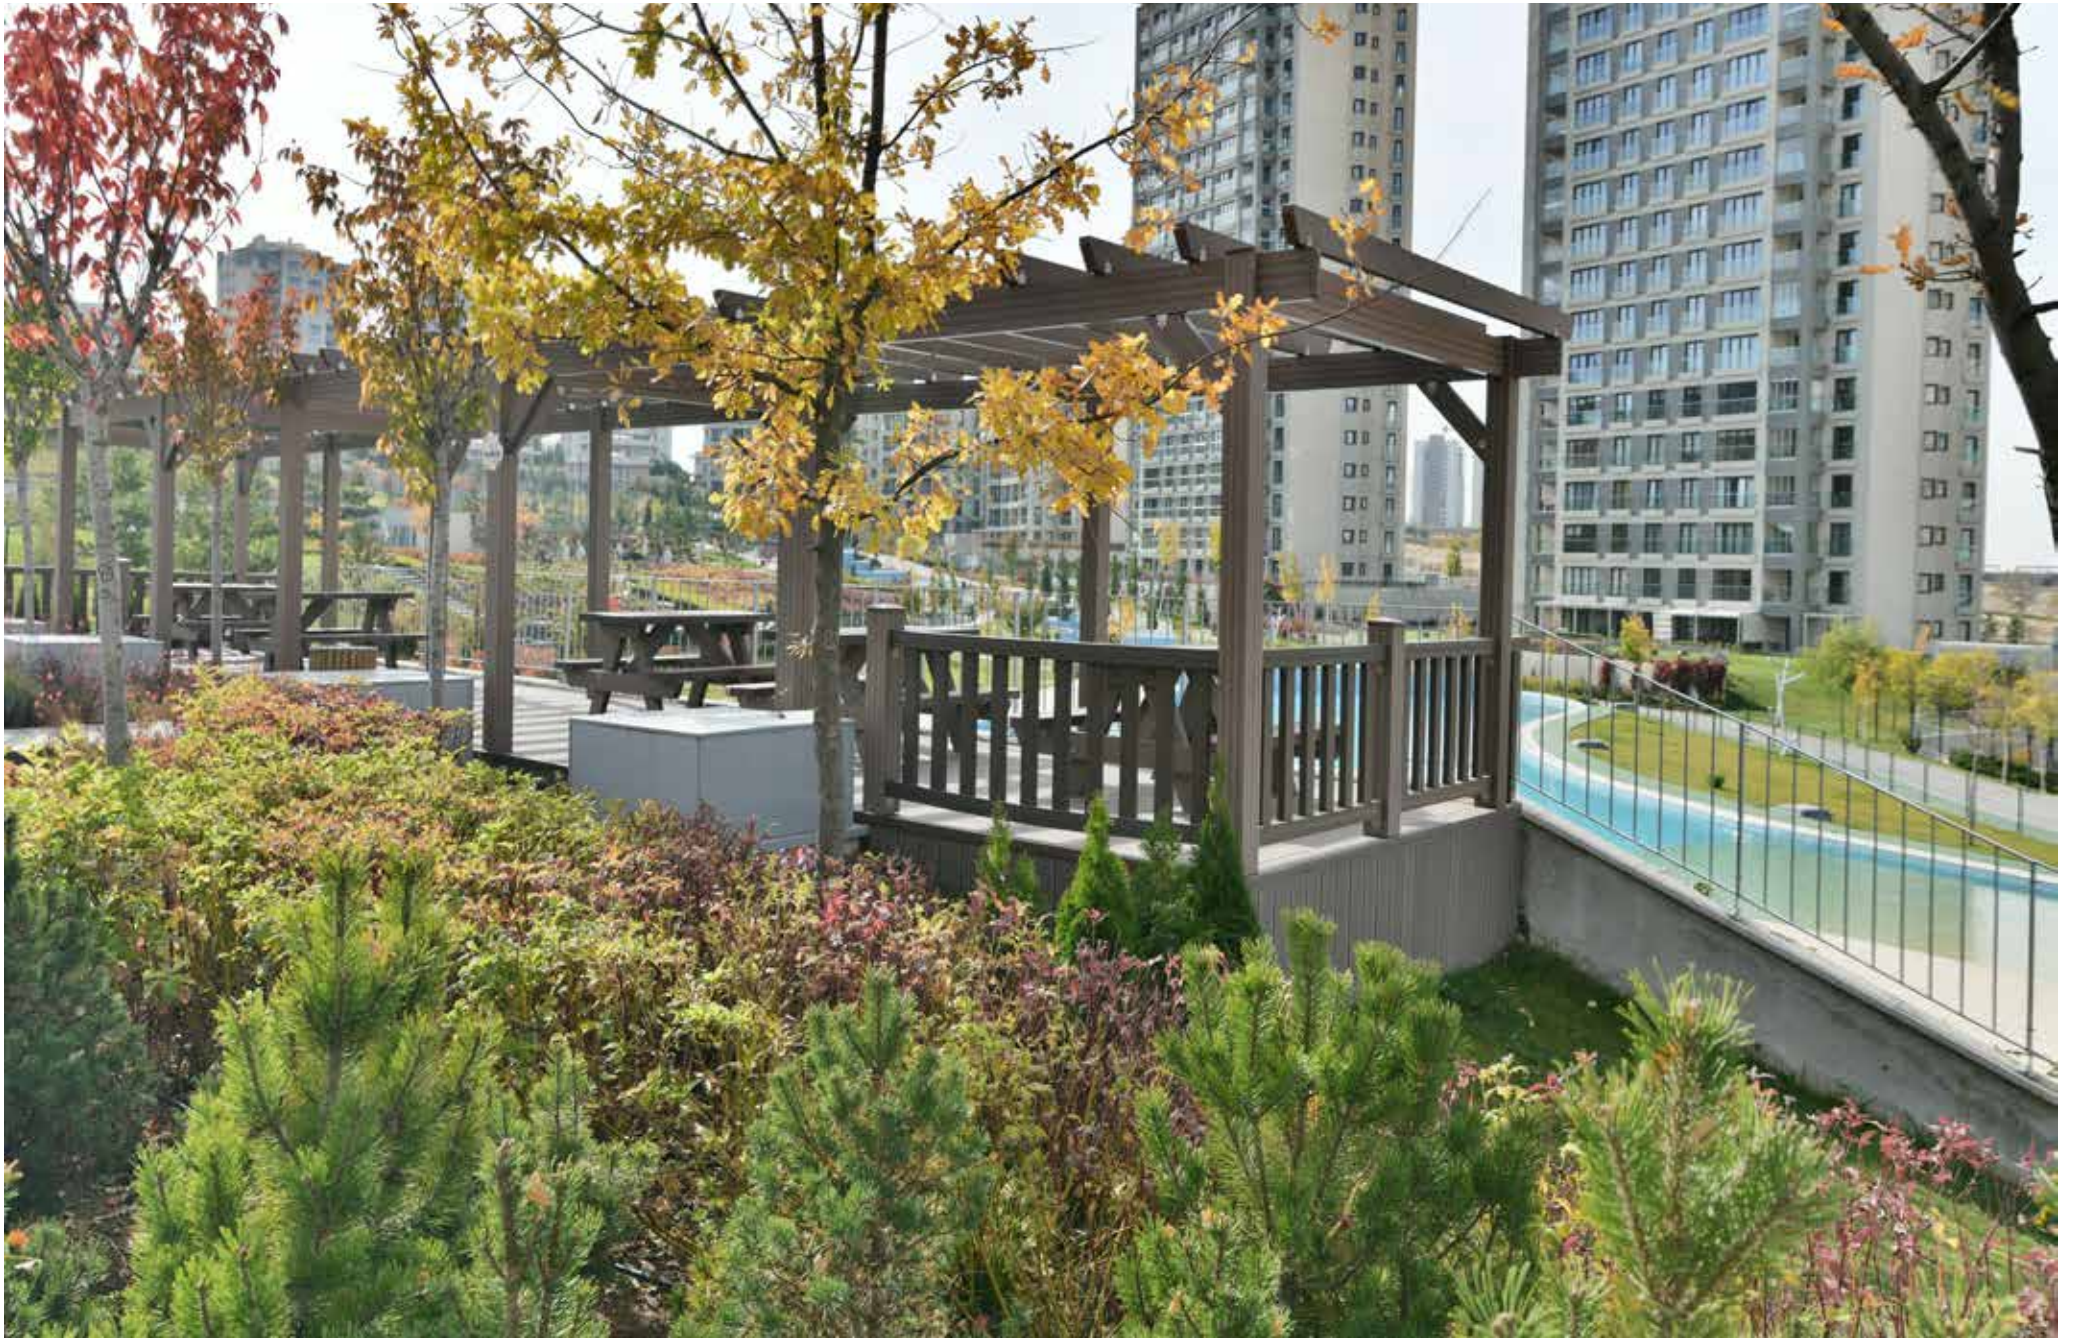

A product from WTBCompany has it all plus you don't need to paint it every second year like one made of wood.

The WTBCompany composite is built on recycled polypropylene mixed with FSC certified sawdust from beech. This combination will give you a railing easy to install that will still look brand new 20 years later.

A fence is often a neglected item in your garden. It does not get cleaned that often and after a while some moss and even mildew may start to grow but no problem, just hose it off with some water.

A railing is very exposed to UV rays which is why we at WTBCompany do not work with anything but UV-stable polypropylene instead of the less expensive materials such as PVC, polystyrene or polyethylene.

We don't want you to rebuild your fence just because one of the components did not like the outdoors, we want it to stand strong against tough weather and fun family football matches.

PREFABRICATED HOUSE

Do you need a shed for your tools, an office to work in peace at, a guest-house or a café on the beach? Come to us at WTBCompany.

For the frame you use the same profiles as for a pergola but after that the real fun will start. As a clicking system you will fast build up walls and roof. Profiles are light so no need for heavy machineries. We can even supply you with the clicking profiles that have insulation – not just against the cold but also against the heat.

Building a small hut does take some time and once done we all want it to stand there looking forward to a long healthy life. Therefore, we at WTBCompany have carefully selected the best raw materials. We use recycled polypro-pylene mixed with FSC certified saw dust from beech. This combination has proven to be easier to build with and lasts longer than using PVC, polysty-rene or polyethylene.

Have we mentioned that a Prefabricated house from WTBCompany does not require any maintenance? Just hose it if it's dirty but otherwise just enjoy yourself.
